PGDW20 is Jeff Locker's well nearest DW well to our monitoring well MW02.

Pls see media request on Pavillion below. It sounds like the MHK film crew visited PGDW20, not sure who's well that is.

Reporter has Qs about specific data tables in the ARR.

Hi Richard,

Thank you so much for your response. I have attached the data that I am hoping to get clarification for...

I'm looking to find out if any of this data represents chemicals that are not suppose to be in the water, or chemicals that makes the water hazardous to drink.

I wasn't sure if all of the chemical names listed applies to this, so I was hoping to clarify with you.

At the well I have highlighted in pink, PGDW20, is the well we have visited, and their water filter turns black after a couple of days. Our goal for the data is to hopefully find out which chemical is causing this filter to turned into that color.

Please let me know and I again appreciate your help!

Looking forward to hearing from you again soon,

Mayumi-- sorry, Monday is a busy meeting day for me. Can you send me a PDF or link to the graphic you are referring too? I may need to send you to my technical experts, but if its something simple I may be able to help.

Hi Richard,

Thank you so much for this press release and I apologize for my delayed response.

Why was the public comment period extended to Sept. 30th? Was it because of the high number of public comments?

Please let me know and I look forward to hearing from you,

Mayumi Maruyama

Hi Mayumi, I have a statement on the extension. Please attribute to the Agency.

.....

EPA has announced an eight month extension to September 30, 2013 for the public comment period of the draft research report titled, "Investigation of Ground Water Contamination near Pavillion, Wyoming." During this time EPA will continue its public outreach activities including meeting with key stakeholders and posting additional technical information on the Agency's website. This extension will allow the public additional opportunity to comment on EPA's draft report and the latest round of sampling conducted by EPA and USGS. The Agency will take into account new data, further stakeholder input, and public comment as it continues to review the status of the Pavillion investigation and considers options for moving forward.

Subject: Update on the ground water investigation in Pavillion, WY

Dear Richard,

I am writing from the Los Angeles bureau of NHK, Japan's sole public broadcaster and largest media outlet. Thank you so much for your continuous help and updates on the ground water investigation in Pavillion, WY.

I have recently heard that the public comment period has closed on Jan. 30th, and would like to follow up with you on what the next steps are on this topic.

Is there a deadline for the review process? What happens after the review process?

Please let me know and I look forward to hearing from you,
